

A Complete Line of High Quality Ultrasound Gels

FEATURES

99% NATURAL FORMULATION

EcoVue® has a gentle formulation free of dyes, parabens, and propylene glycol, making it gentler on patients and equipment.

IMPROVED SUSTAINABILITY

EcoVue® offers the option of waste-reducing packaging with the patented FlexPac. The gel is 86% bioderived carbon based materials meeting USDA BioPreferred guidelines, to help hospitals meet sustainability initiatives.

INFECTION CONTROL

Single-Use packaging options provide flexibility to meet today's efficiency and infection control demands.

EXCEPTIONAL IMAGE QUALITY

Delivering outstanding image quality, EcoVue® provides seamless glide and optimal acoustic velocity at any temperature.

EASY CLEANUP

EcoVue® gels clean up easily on both patient and the probe with minimal residue left behind.

EcoVue® Ultrasound Gel sets the standard in high quality ultrasound gel, delivering an exceptional experience for technicians and patients while meeting today's infection control demands, helping to extend the life of equipment, and delivering bottom line value.

SAFEWRAP® STERILE PACKAGING

32032081

32032079

32032076

Provides a sterile field-ready solution to meet the increasingly stringent infection prevention and control demands of today's healthcare environment.

Available in the original formula (20g and 32g and HV (20g), EcoVue® gel's single-use packaging options with SafeWrap®

A Complete Line of High Quality Ultrasound Gels

ECOVUE® PRODUCT LINE - Gentle glide and an optimal acoustic velocity at any temperature

**Analysis derived from a 2015 GHX Data report*

ECOVUE® HV PRODUCT LINE - Higher viscosity formula for procedures requiring a thicker gel with more staying power

The best features of EcoVue® ultrasound gel - natural formula, exceptional image quality, no propylene glycol so it is easier on equipment, and optimal integration with the transducer - are now available in an option that is 35% thicker. EcoVue® HV offers a choice for procedures with more challenging scan surfaces that demand more staying power, delivering efficient, accurate scans.
